

# **Techniques for Characterization of Carbohydrate Structure of Plant and Microbial Polysaccharides**

**August 7-11, 2023**

## **Course Overview:**

This 5-day hands-on course will provide series of lectures and demonstrations, which cover the theory and techniques of isolation, purification and structure characterization of poly-, oligo-saccharides and glyco-conjugates. Participants will learn the theory and techniques of glycosyl-residue and glycosyl-linkage composition analyses using gas-liquid chromatography mass spectrometry (GC-MS). These methods for derivatization of sugar samples to make alditol acetates and trimethylsilyl derivatives and the production of partially methylated alditol acetates, which the trainees analyze by GC-MS. Lectures and demonstrations will cover such techniques for structural analysis of polysaccharides by mass spectrometry and NMR, and methods for the separation and purification of polysaccharides by chromatographic techniques and monosaccharides and oligosaccharides using HPAEC.
